EXPERIENCE

Frontend Developer, Project Lead

2020 - 2023

Built complex custom applications for clients across a broad range of verticals in both a primary Front End and project-lead Front End capacity.

Worked in close cooperation with Product Managers, Designers and both Front and Back end developers to both gather requirements directly from the client and build products that exceeded client expectations.

- Worked closely with a startup founder to produce an React/Rails based alpha build of his small-business investments platform on an aggressive timeline as the sole frontend developer paired with a single backend developer.
- Built a custom Salesforce live agent application to enable real-time chat functionality and document share between customer agents and product knowledge experts for a major pharmaceutical company.
- Spent a year and a half with a small team embedded with an enterprise financial services company building out a customer-facing React platform which automated and improved legacy processes surrounding asset custody.
- Using React and Ionic, rebuilt a legacy desktop-only client portal into a desktop + mobile solution for an accounting firm specializing in trucking.

Frontend Engineer, Jr.

2018 - Closed (June 2019)

Developed a modern e-commerce platform designed to “change the way people sell things online”.

- Primary front end engineer tasked with prototyping and building out the storefront UI elements, checkout experience and merchant dashboard interface.
- Shared in backend tasks building out our API and integrating AWS Lambda services. Express backend built using MongoDB Atlas and S3 with GraphQL Yoga and Prisma API.

SUMMARY

Seasoned developer and software consultant with exceptional client communication skills and experience leading projects and working in cross-functional teams to deliver results.

EDUCATION

Computer Science, M.S.

DePaul University, 2019

Computer Science, M.S.
